

Begin practice of file processing with python:

This will be multiple lines of text to text reading and printing the text as lines of text using a for loop to do it. The simple code for this process will be:

```
xfine = open("mbox.txt")
for line in xfile :
    print(line)
```

I will repeat this over and over to make a long list of lines for processing with the for statement and other commands to begin to understanding how to use python to process files..

From here I will repeat over and over.
